Building European sovereignty for the age of AI

Netcompany at a glance

Founded in Copenhagen in 2000, we have grown into an organisation of more than 10,000 professionals across more than 10 countries, supporting governments, critical industries, and enterprises with secure, reliable, and transparent digital solutions.

We design, build, and operate digital infrastructure that underpins essential public services and core business operations in complex and regulated environments.

As Europe enters the AI era, Netcompany is providing AI-embedded solutions, developed in Europe for Europe, enabling faster delivery of sovereign digital infrastructure across the continent's most demanding enterprise and government projects.

Meet company A

A leading Danish construction retailer with a strong presence across the Nordics:

- Hundreds of stores across Denmark, Norway, and Sweden
- Serves both construction businesses and individual consumers
- Provides building materials, tools, and home improvement products
- Operates across multiple markets, each with its own local business needs

One business. Three markets. Different ways of working.

Business Challenges

Over time, each country and region has developed its own systems and manual processes to meet local needs.

This has created several challenges:

- **Manual processes**
  Create inefficiencies and require significant employee effort.
- **Inconsistent operations**
  Different ways of working can lead to inconsistent store operations and customer experiences.
- **Delivery & fulfilment**
  Challenges with orders and deliveries can affect efficiency and reliability.
- **Fragmented systems**
  Different systems across countries make it difficult to scale improvements across the business.

The challenges are interconnected, but their impact and urgency differ from one market to another.

Different market, different priorities

The most critical challenge is not necessarily the same in every country.

For example:

- **Denmark**
  Manual processes may create the greatest impact.
- **Norway**
  Store operations may be a more urgent priority.
- **Sweden**
  Delivery and order fulfilment may have greater business impact.

At the same time, Company A operates in a **highly competitive market**.

Failing to address the most critical challenges could affect the company's ability to compete and serve its customers effectively.

The question is: Where should Company A focus first?

One solution. Different realities

The executive board wants to invest in **one digital solution** that can deliver the greatest business impact.

However, the solution cannot simply be rolled out in exactly the same way across all three countries.

Your solution needs to consider:

- Local processes and business requirements
- Existing systems and technology
- Different operational needs
- Store and distribution operations
- The impact of change on employees and customers
- Different implementation and rollout approaches
- One strategic solution does not necessarily mean one identical implementation.

Your mission as IT consultants

The company cannot solve every challenge at once.

Your team, as IT consultants, needs to make the right strategic choices and focus on one opportunity that can realistically deliver meaningful impact to help Company A.

- **01: Identify**

  Choose ONE key business opportunity to address.

- **02: Prioritise**

  Explain why this opportunity should be prioritised over other challenges.

- **03: Solve**

  Propose a digital solution and a focused MVP scope that demonstrates its potential business impact.

- **04: Scale**

  Consider how the solution could be rolled out across different markets, taking local differences and implementation constraints into account.

⏱️ **Time to market is critical.**

- Scope carefully. Focus on one problem. Maximise the impact.

Responsibilities

© Copyright Netcompany

Responsibilities

- **Deliver a proposal presenting your team's solution**
- Submission: **maximum 10 slides**
- Format: PDF
- Language: **English** preferred
- Deadline: 10 PM, 26 October 2026. Submissions later than that will not be accepted
- Upload the presentation to this link, with the exact team's name

Tips for you

© Copyright Netcompany

Tips

- You may make reasonable assumptions where information is not provided. Clearly state and justify your assumptions.
- This case is intentionally open-ended. Success is not about finding the "right" problem but about selecting a high-impact opportunity and demonstrating a logical, well-structured digital solution to address it.
- Keep time to market in mind when defining the scope of your MVP
- Food for thought:
  - Which business problem did you prioritise?
  - Who experiences it?
  - Why is it important?
  - What solution do you propose?
  - What is the scope of your MVP?
  - Where and how could AI create value in your proposed solution?

Assessment Criteria

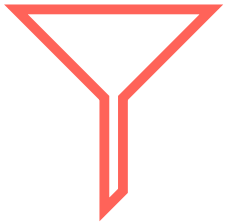

© Copyright Netcompany

Criteria

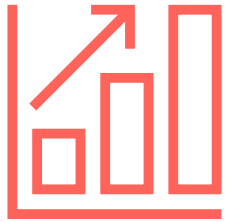

Problem Understanding

Go beyond the surface and find the real problem

Prioritisation & Critical Thinking

Analyse, evaluate and choose what matters most

Business Impact

Turn ideas into measurable value for the business

Feasible solution

Practical, realistic IT solution

Structured thinking & Innovation

Combine creativity with a clear and logical approach
